HOW TO USE THIS VAULT — READ FIRST

These 100 prompts are tested across ChatGPT-4o, Claude 3.5+, Gemini, and Perplexity. Each one is built around the same **5-part architecture**:

1. **ROLE** — who the AI is
2. **TASK** — what to do
3. **INPUT** — what you're giving it
4. **RULES** — constraints to prevent generic output
5. **FORMAT** — exactly how to return the result

The 3-step workflow:

1. **Pick** — find the right prompt for the task at hand.
2. **Fill** — replace every [BRACKET] with your real input. Don't skip any.
3. **Refine** — if output isn't perfect, follow up with: *"Now make it sharper / shorter / more like [example]."*

Pro move: Save your top 10 most-used prompts as **ChatGPT custom instructions** or **Claude projects**. You'll save another 4 hours/week.

THE VOICE FILE SYSTEM — DO THIS ONCE

Most prompts here include [VOICE FILE] . Building one takes 15 minutes and 10x the quality of every output forever.

Step 1 — Collect 5 samples

Find 5 pieces of writing that **sound like you** (your tweets, blog posts, emails, even DMs).

Step 2 — Save this prompt

You will write in my voice. My voice has these traits:

- Tone: [3 adjectives — e.g. sharp, casual, confident]
- Sentence length: [short / medium / mixed]
- Things I never say: ["circle back", "synergy", "let's unpack", "in today's fast-paced world"]
- Punctuation style: [em-dashes? semicolons? heavy emojis? none?]

Here are 5 examples of my writing:

[PASTE SAMPLE 1 — about 200 words]

[PASTE SAMPLE 2]

[PASTE SAMPLE 3]

[PASTE SAMPLE 4]

[PASTE SAMPLE 5]

When I ask for content, write in this voice — exactly. Confirm you understand by listing the 3 strongest patterns you noticed.

Step 3 — Use it everywhere

Whenever a prompt references [VOICE FILE] , paste your finished voice file at the top.

BONUS — THE 5 PROMPT ENGINEERING RULES

Rule 1 — Specificity beats cleverness

Bad: "Write me a tweet about marketing." Good: "Write a 240-character tweet for SaaS founders about why CAC payback matters more than LTV. Voice: sharp, contrarian. No emojis."

Rule 2 — Constraints make better output

The more rules you add, the less generic the answer. AI loves to be average. Constraints force it to commit.

Rule 3 — Show, don't tell

"Write in my voice" — mediocre. "Write in my voice. Here are 5 examples of my writing: [paste]" — 10x better.

Rule 4 — Format your output

Always end with: "Output as: [bulleted list / table / code block / numbered with labels]". Otherwise AI defaults to wall-of-text.

Rule 5 — Iterate, don't restart

If output is 70% there, follow up: "*Make this sharper*" or "*More like example 2*". Don't start a new prompt — refine.
